

HUNTING - JAVELIN

(H)

The javelin is longer than an arrow. A hunter threw the javelin. He had to be close to the animal to use the javelin.

A short javelin was only as long as a yardstick. A long javelin was as tall as a tall basketball player.

The stick must be strong and straight. It was made of wood.

The head of the javelin was made of metal - bronze or iron.
